- Antifungals
- Antibacterials
- Antibiotics
- Antituberculosis

OTHER DRUGS - 5

- Eliglustat
- Dextro
- Methyleneblue
- Tetrabenazine
- Tolterodine

WHY ONEDNA PHARMA GENECARE?

- Ensuring the highest standards of quality, accuracy, and compliance with regulatory guidelines.
- Our panels cover a wide range of major pharmacogenes recommended by CPIC and FDA guidelines (e.g., CYP2C19, CYP2D6, SLCO1B1, TPMT, VKORC1, etc.) with Clear, easy-to-interpret results and evidence-based recommendations integrated with current prescribing standards.
- Our non-invasive, saliva-based test kit is simple and convenient. We offer a fast turnaround time of 3 weeks, without compromising accuracy.
- Your genetic data is sensitive. We ensure strict confidentiality for data protection and ethical handling..

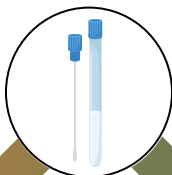

✓ IDEAL FOR

- Patients with ew medication regime to avoid trail-and-error.
- Individuals experiencing severe side effects or unexplained drug toxicity.
- Patients on several medications—common among elderly or those with multiple chronic conditions.
- Treatment resistance cases.

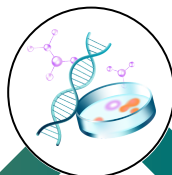

⚙️ HOW IT WORKS

Receive your Pharma GeneCare kit
at home or from the clinic

Collect your saliva sample using the
easy-to-follow instructions

DNA sequencing and analysis
of your SNPs

Get a detailed report and
personalised health plan

Opt for a consultation with our
experts for guided support

Our Services

What can we do for you?

- Gut Microbiome
- Preventive Genetics
- Clinical genetics
- Newborn screening
- Prenatal genetics
